Customer service trusted worldwide and the power and flexibility of Office365

Do your best work wherever you need to be, with confidence that your data is protected. Whether you want to access your latest files on the road or connect with team members from a remote location.

This document outlines some of the issues faced by our customers on a daily bases and the solutions available to them by using Offie365 via Blacknight.

Businesses today face a constantly evolving set of potential threats, from data security breaches to downtime from unexpected events. Businesses are asking questions like:

- With growing use of the cloud and mobile devices at work, how can we keep business data protected?
- As my data grows, how can I make sure it is all backed up without spending a fortune?
- If an unexpected event occurred, like a fire, break-in, or flood, how long would it take our business to get back online? And what would this downtime cost our business?
- How do we keep up with a constantly changing compliance landscape?
- Do we know who our best customers are?

Moving to the Cloud

Myths About Moving to the Cloud

What small and medium-sized businesses really need to know about moving to Microsoft Office 365

MYTH 1 - Office 365 is just Office tools in the cloud, and I can only use it online.

Office 365 is a suite of cloud-based productivity services, which can include the Office desktop client you already know and use, including Microsoft Word, Excel, PowerPoint, Outlook, and OneNote, with the added benefit of being licensed, deployed, and updated as a service.

MYTH 2 - I have to move everything to the cloud; it is an all-or-nothing scenario.

We can help you move workloads such as file sync and share (OneDrive for Business) or email (Exchange) first, and then help you figure out the right long-term plan for more difficult or larger projects.

MYTH 3 - Cloud migration is too much for my business to handle.

We're not going to tell you it's as easy as pie. But you can be up quickly for agile initiatives and calculated data migrations. We'll help you every step of the way with information & tips.

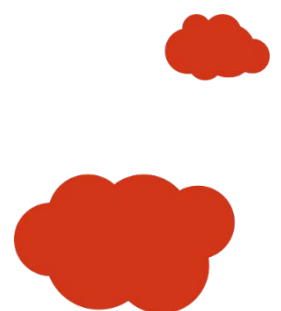

MYTH 4 - Continuously updating Office 365 will break my critical business applications.

A lot rides on users being able to use business critical apps and add-ins with Office. Microsoft are committed to compatibility with the tools you use every day with Office 365. They do that by:

- Working hard to ensure that even as we update Office on a regular basis in the cloud, they ensure our updates do not impact areas that would impact other software applications.
 - Helping you avoid compatibility issues with guidance and best practices for update management and development.
- 

Benefits of Office 365

Worry less

Office 365 from Blacknight. 100% Irish owned & based in Ireland, Microsoft Tier 1 partner

Easy, affordable data backup Ready when you need it

Always have access to
your latest files

Keep your files synchronized across your devices and access them anywhere, anytime, both online and offline, with OneDrive for Business, where you have the confidence that your data is continuously backed up in Microsoft's geographically distributed datacenters.

Easily back up
business applications

Get peace of mind knowing your data is backed up and that you can restore your information quickly with Azure Backup, which provides scalable, secure backup services and up to 99 years of data retention for legal compliance.

Protect your data Wherever it goes

Get easy protection
and control of all your
PCs, mobile devices,
and apps

Easily get control of personal and company-issued mobile devices with tools built into Office 365, Windows 10, and Enterprise Mobility Suite (EMS).

Give employees
easier, more secure
access to everything
they need

Provide employees a simpler, more consistent way to access all their applications, websites, and devices with a single sign-on using Enterprise Mobility Suite (EMS).

Get protection that
travels with your
business data

Easily attach encryption and rights management rules to business data to help prevent unauthorized access and use with Enterprise Mobility Suite (EMS) and Enterprise Data Protection in Windows 10.
